

# Manual Pulse Generator ( MPG )

A manual pulse generator (MPG) is a device for generating electrical pulses (short bursts of low current) in electronic systems under the control of a human operator (manually). MPGs are used on computer numerically controlled (CNC) machine tools, on some microscopes, and on other devices that use precise component positioning.

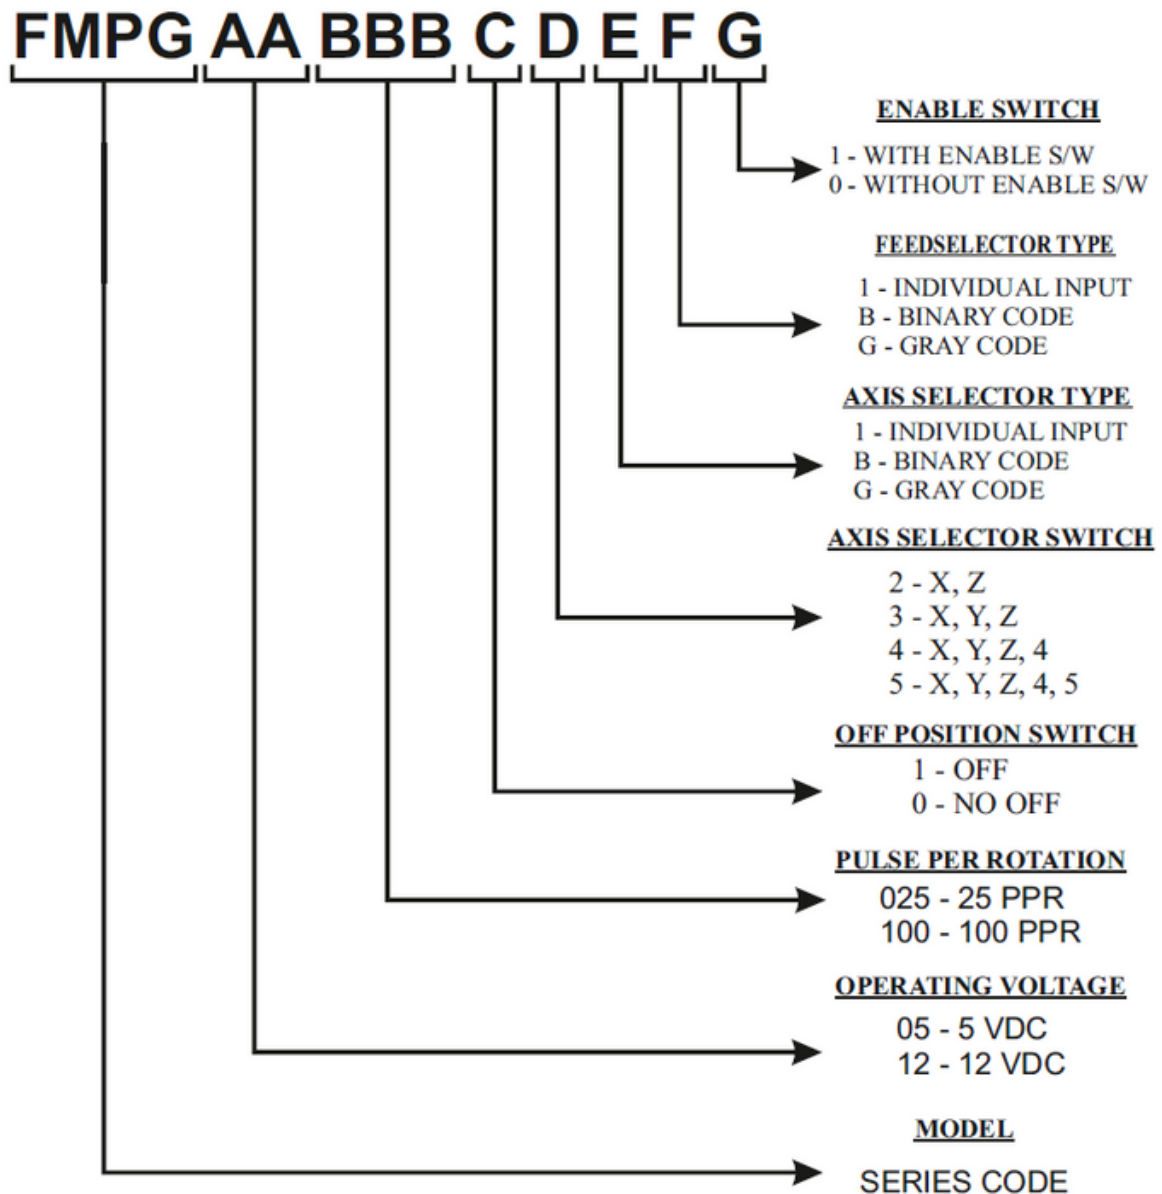

## FEATURES

- CNC Controls for Fanuc, Mitsubishi, Siemens.
- Multiplier x1, x10, x100 and axis selector Switches.
- 5v TTL outputs (Point to point).
- IP 65, enclosure protection.
- Std. 2 or 3mtr. extended spiral cable.
- Magnetic back cover.
- LED indication available.

## ORDERING INFORMATION

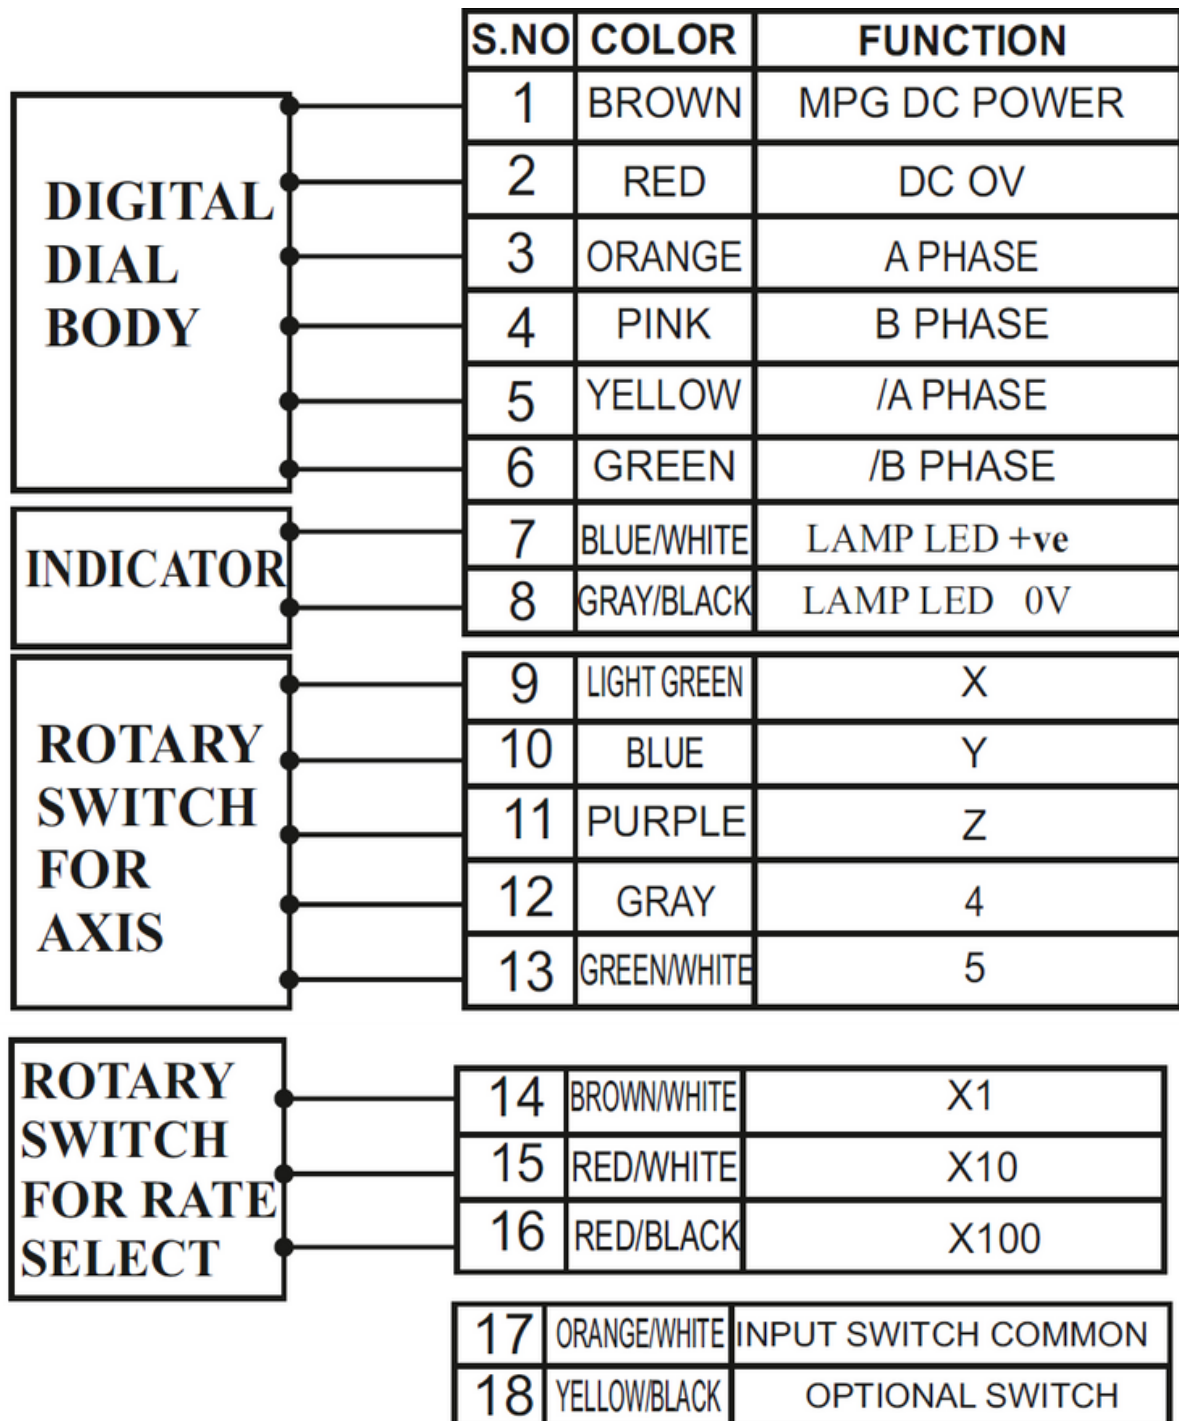

## ORDERING EXAMPLE

If you need to order a MPG of 12v input with 25 pulse per rotation with off position enabled and rotatory Axes selector switch with 5 axes binary code and multiplier selector switch with gray code. For the above mentioned information the ordering code is as follows:

**FMPG1202505BG0**
